CMS Kit Demo

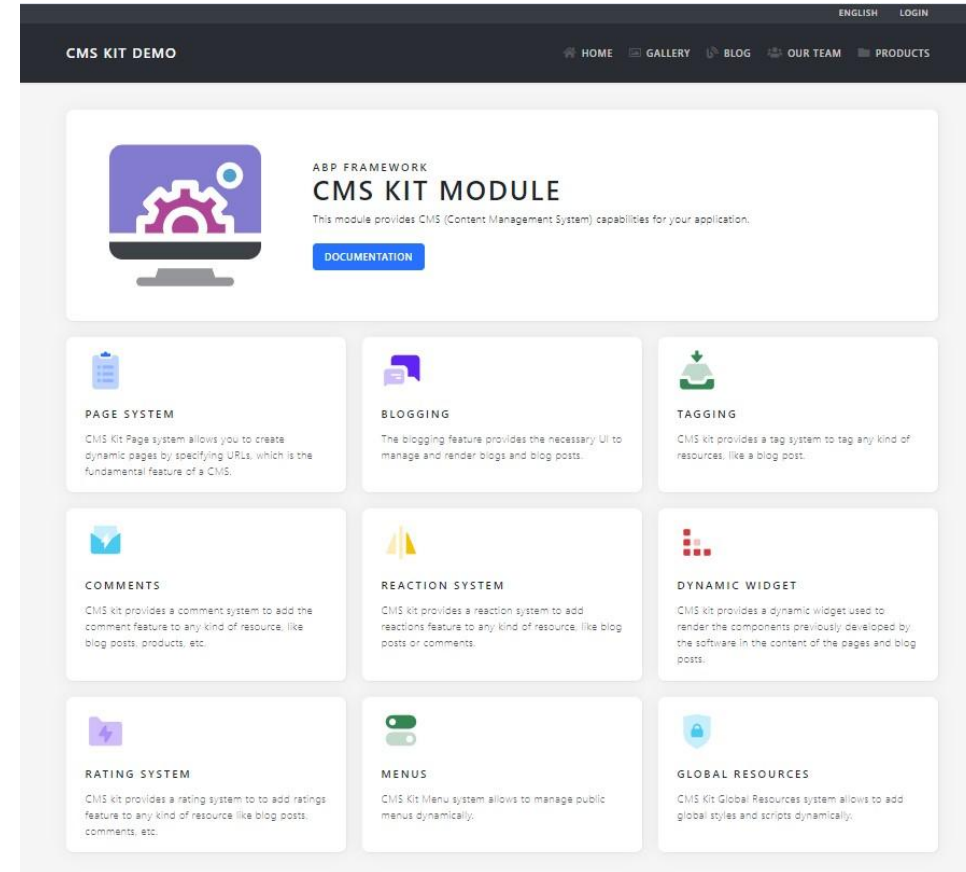

This is a sample application designed to demonstrate the capabilities of the ABP Framework's **CMS Kit Module**.

Requirements

- .NET 7.0+

How to run?

This application uses SQLite as the database and the database can be found in the solution folder. Therefore, you don't need to create the database and instead, you can directly run the `CmsKitDemo` project to see the application.

The screenshot shows the CMS Kit Demo website. The website has a dark header with the title **CMS KIT DEMO** and navigation links: HOME, GALLERY, BLOG, OUR TEAM, and PRODUCTS. The main content area features a large hero section with a gear icon and the title **ABP FRAMEWORK CMS KIT MODULE**. Below the hero section, there are several feature cards arranged in a grid. Each card has an icon, a title, and a brief description of the feature.

ABP FRAMEWORK CMS KIT MODULE

This module provides CMS (Content Management System) capabilities for your application.

DOCUMENTATION

PAGE SYSTEM

CMS Kit Page system allows you to create dynamic pages by specifying URLs, which is the fundamental feature of a CMS.

BLOGGING

The blogging feature provides the necessary UI to manage and render blogs and blog posts.

TAGGING

CMS kit provides a tag system to tag any kind of resources, like a blog post.

COMMENTS

CMS kit provides a comment system to add the comment feature to any kind of resource, like blog posts, products, etc.

REACTION SYSTEM

CMS kit provides a reaction system to add reactions feature to any kind of resource, like blog posts or comments.

DYNAMIC WIDGET

CMS kit provides a dynamic widget used to render the components previously developed by the software in the content of the pages and blog posts.

RATING SYSTEM

CMS kit provides a rating system to add ratings feature to any kind of resource like blog posts, comments, etc.

MENUS

CMS Kit Menu system allows to manage public menus dynamically.

GLOBAL RESOURCES

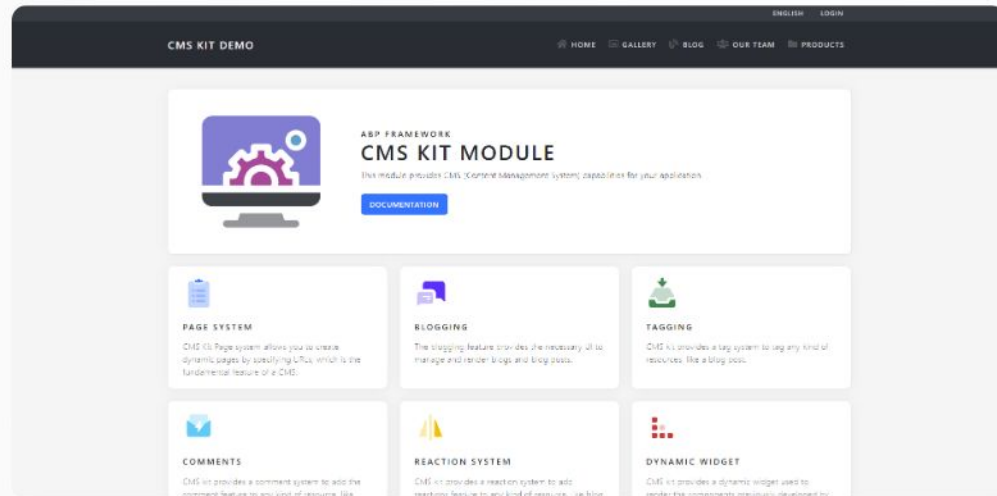

CMS Kit Global Resources system allows to add global styles and scripts dynamically.

ABP CMS Kit: Demo - Main Structure

This is the navbar of the application and each page corresponds to a CMS Kit Feature:

- **Gallery:** Custom implementation (image gallery) with CMS Kit's [Comment](#) & [Reaction](#) Features
- **Blog:** [Blogging](#) Feature (with [Ratings](#), [Comments](#), [Tags](#), and [Reactions](#) features as enabled)
- **Our Team & Products:** [Pages](#) Feature (with dynamic content, styles & scripts)

The application menu items are created & ordered dynamically with [CMS Kit's Menu System](#).

DEMO

Customization

<https://github.com/abpframework/abp/tree/dev/modules/cms-kit>

<https://docs.abp.io/en/abp/latest/UI/AspNetCore/Customization-User-Interface>

Thanks to the [Virtual File System](#), an application (or another module) can override a virtual file of a module just like placing a file with the **same name** and **file extension** into the **same folder** of the **virtual file**.
